

What if every conversation started with *the full picture*?

AI Insights turns three months of patient and staff history into one clear, AI-generated view, before the conversation even starts. Now live across patient rounding, staff rounding and outreach follow-up.

Today that history lives in **scattered notes, systems, and memory**. AI Insights puts it in front of your care team first.

Patient Rounding

Know the patient before you walk in

For bedside nurses

AI Insights gives care teams a quick view of what matters most before they walk in, so there's no digging through notes or trying to remember. That time back turns into a conversation that feels personal, not rushed.

Staff Rounding

Pick up right where you left off

For nurse leaders

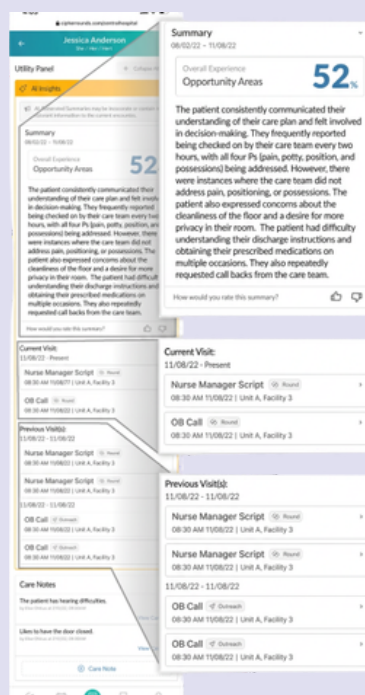

AI Insights gives leaders a quick view of recent wins, concerns, and past conversations with every person on their team, so no check-in starts from zero. That continuity makes people feel seen, driving stronger satisfaction and retention.

Follow-up patient outreach

Never make patients repeat themselves

For outreach care teams

AI Insights gives callback teams the full picture before they call, so patients never have to repeat themselves. Every follow-up feels personal, not scripted.

One summary. *Everyone on the same page.*

Every AI Insights summary surfaces an Opportunity Areas score, an instant read on where a patient's or a staff member's experience needs attention, plus a chronological timeline of what was said and when.

It's also the same view for everyone on the team, so a handoff never means starting over. Patients feel the consistency of one connected care team, not a rotation of new faces.

What care teams are already telling us

Two things come up again and again from the teams using it.

Time back in the day

The most consistent feedback we hear: AI Insights cuts down prep time. No more digging through charts or scrolling past visits to find what matters.

Knowing what to expect

Just as often, care teams tell us it changes how prepared they feel walking into a room or a staff check-in, since they already know what's coming.

BENEFITS

Bedside Nurses	Starts every visit already knowing the patient's history, including patterns like recurring requests, so they can act before being asked.
Nurse Leaders	Walks into every staff round already knowing recent wins and concerns, catching morale issues early.
Outreach Teams	Follows up already knowing what's unresolved, so patients never have to repeat themselves.

HOW IT WORKS

1 Every round and outreach call gets captured

Every round and outreach call gets captured. Nurse-led rounds, self-service rounds, and outreach calls are all logged automatically, so nothing slips through.

2 AI generates a summary

The last 3 months are condensed into one summary, with an Opportunity Areas score and a chronological timeline.

3 Care teams walk in ready

Nurses, leaders, and callback teams see the full picture before the next round, check-in, or call.

4 Care teams catch recurring needs early

When something keeps coming up, like a patient who always asks for an extra blanket, AI Insights surfaces the pattern, so the team can act before they even open the door.

I used to hunt through old rounds, catch a coworker in the hallway, and hope my memory filled in the rest. Now I open one summary and I'm ready before I even walk in the door."
